Math Activators

by Heidi Sabnani and Molly Vokey

The ideal resource to practice, reinforce, or reteach fraction, decimal, and integer concepts.

Many students struggle with the foundational skills they need to master more challenging concepts in middle school and high school. Teachers use Math Activators as a discussion starter to help students master key concepts.

In grades 3-5, the activators enrich number talks to reinforce fraction, decimal, and integer concepts as students are learning.

In grades 6-8, teachers use the activators to prompt classroom dialogue and reinforce key concepts with students as they explore grade-level content.

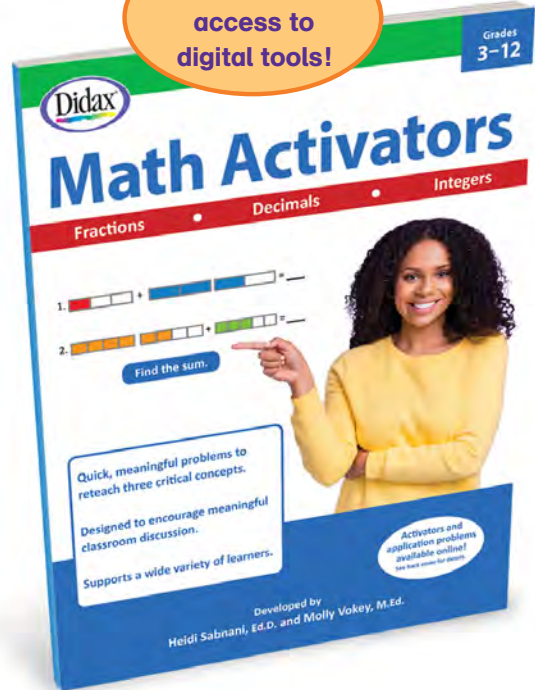

In grades 9-12, the activators are used to guide discussion as students review foundational skills needed to succeed in high school math.

Use Math Activators as an engaging ten-minute activity at the beginning of class to support learning. Teachers use the digital resource to display an activator, and the full-color teacher pages provide discussion prompts and sample solutions.

Grades 3–12
